## PREFACE

In this book made by a thousand hands and many other heads, we can read the very funny adventures that begin with two school friends, Ana and Miguel, and who venture into real, imaginary, achievable or idealized worlds. The concern with the preservation of the environment is greatly reflected here, as well as the operationalization of some very creative solutions to protect the threatened species of our planet.

The narratives and dialogues are timeless and universal and delight us with an intergenerational dialogue where we can see the comparison with the times of our ancestors and with the technological and sophisticated world of today.

Children are the future and effectively, through written stories and their illustrations, we come across groups of Pre-School and Basic Education students who are very critical and active, capable of making a difference and promoting solutions to the major crises that we face today.

Take this journey with us and immerse yourself in a world of joy, but also of sadness, of optimism and concern, of movement and action and never forget that everything ends well, with the promise of new challenges.

## CONCLUSION

From the towering skyscrapers of our cities to the pristine depths of our oceans, the impact of human activity reverberates throughout our planet. Yet, amidst the turmoil, there is hope. Technology, wielded with wisdom and foresight, has the power to catalyze change on a scale previously unimaginable. From renewable energy solutions to innovative conservation efforts, we've seen how the marriage of innovation and environmental consciousness can pave the way to a brighter tomorrow.

But our journey does not end here. As stewards of this planet, we bear a solemn responsibility to safeguard its treasures for generations yet unborn. It is a duty that transcends borders and ideologies, calling upon us to unite in a common cause. For in the delicate balance of nature lies the very essence of our existence.

As we turn the final page of this book, let us carry forth its message with unwavering resolve. Let us embrace the potential of technology as a force for good, while never losing sight of our duty to protect and preserve the natural world. For in this symbiotic relationship lies the blueprint for a future where humanity and nature thrive in harmony.

The road ahead may be fraught with challenges, but it is also illuminated by the beacon of possibility. Together, let us march forward with courage and conviction, knowing that our actions today will shape the world of tomorrow.

4

Era uma vez uma menina chamada Ana que estava em casa. Depois foi brincar para a rua e a mãe chamou-a para almoçar.

O almoço era brócolos, cenoura, arroz e peixe. A seguir a Ana foi passear com a mãe à praia. Depois da praia foram ao circo.

No circo viram palhaços, bailarinas, trapezistas, lançadores de fogo e cavalos a saltar por dentro de arcos.
